Electrochemistry Modulated Interfacial Processes: Fundamental and Application

Message from the Guest Editor

Interfacial processes have governed device performance from various perspectives—in mechanics, it is critical in friction and lubrication for machine efficiency; in chemistry, interfacial chemical properties have great influence on surface activity, which directly determines the catalytical performance, corrosion resistivity, and charge transfer characteristics of functional materials; and in biology, by understanding the essential biochemical reactions/processes of life that take place at the interface of cell membranes, Golgi apparatus and endoplasmic reticulum are crucial for medicine development as well as artificial implants design. Through the increasing study of the macroscopy features of aforementioned interfaces, a more fundamental, molecular-scope understanding becomes significantly necessary. The proposed Special Issue is dedicated to collecting cutting-edge researches from various fields to provide a platform that can encourage multidisciplinary dialogue. There is specific focus on electrochemically modulated interfacial kinetic studies.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Masato Sone
Institute of Innovative Research, Tokyo Institute of Technology, 4259
Nagatsuta-cho, Midori-ku, Yokohama 226-8503, Japan

Author Benefits

High Visibility:

indexed within Scopus, CAPlus / SciFinder, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 24 days after submission; acceptance to publication is undertaken in 7.8 days (median values for papers published in this journal in the first half of 2024).

Journal Rank:

CiteScore - Q2 (Materials Chemistry)
