Deadline for manuscript
submissions:

15 January 2025

Message from the Guest Editor

Dear Colleagues,

In recent years, huge progress has been made in natural language processing. Initially, this progress has been related to the advent of large language models. We must acknowledge that state-of-the-art language processing and understanding systems are almost able to reach a level of performance that is close to humans, at least in some areas and applications. But still, there are lots of problems that require further analysis and investigation. How much data do we need to reach a human-level performance? Do we really need such large amounts of data? We as humans can learn from a much smaller amount of data. How can we guarantee that the model in one language will be adequately transferred to another language? How can text generation systems add emotional content to the text messages in a close-to-human way? These are only a few examples of the questions that require further research and new ideas and solutions. Of course, this is not an exhaustive list of problems that the research community faces in the area of natural language processing.

an Open Access Journal by MDPI

Editor-in-Chief

Department of Electronics and
Telecommunications,
Politecnico di Torino, 10129
Torino, Italy

Message from the Editor-in-Chief

Electronics is a multidisciplinary journal designed to appeal to a diverse audience of research scientists, practitioners, and developers in academia and industry. The journal is devoted to fast publication of latest technological breakthroughs, cutting-edge developments, and timely reviews of current and emerging technologies related to the broad field of electronics. Experimental and theoretical results are published as regular peer-reviewed articles or as articles within Special Issues guest-edited by leading experts in selected topics of interest.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Physics, Applied*) / CiteScore - Q2 (*Control and Systems Engineering*)
