Message from the Guest Editors

Dear Colleagues,

SDN dynamically and efficiently manages resources to provide diverse services by leveraging controller intelligence and programmability. SDN allows network systems to orchestrate and estimate available resources, as well as dynamically adapt to the environment to maximize resource utilization.

As a promising solution, artificial intelligence is becoming a successful way to boost the intelligence of SDN controllers. Machine learning and artificial intelligence (AI) techniques are effective for network communication adaptation. The controller, which has been trained with sophisticated AI and machine learning algorithms, can improve the provision of end-to-end (E2E) services, security, network slicing, and resource management.

This Special Issue anticipates cutting-edge SDN technologies based on AI/machine learning techniques, covering new research findings with a diverse range of elements within intelligent SDN technology for next-generation networks.

an Open Access Journal by MDPI

Torino, Italy

Message from the Editor-in-Chief

Electronics is a multidisciplinary journal designed to appeal to a diverse audience of research scientists, practitioners, and developers in academia and industry. The journal is devoted to fast publication of latest technological breakthroughs, cutting-edge developments, and timely reviews of current and emerging technologies related to the broad field of electronics. Experimental and theoretical results are published as regular peer-reviewed articles or as articles within Special Issues guest-edited by leading experts in selected topics of interest.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Physics, Applied*) / CiteScore - Q2 (*Control and Systems Engineering*)
