### Message from the Guest Editors

Dear Colleagues,

Non-functional constraints such as execution time, memory capacity, and energy consumption are a significant challenge for designers in the field of embedded systems. New applications are being proposed that integrate an increasing variety of functionality into everyday objects, imposing several additional requirements on embedded system designers.

This Special Issue invites researchers to contribute original research, case studies, and reviews that address topics related to designs and applications of high-performance digital embedded systems.

The topics relevant for this Special Issue include (but are not limited to):

- Low-power IoT applications;
- Embedded FPGA and SoC implementations;
- Embedded ASIC implementations;
- Machine learning on the Edge;
- Efficient data-processing algorithms

## Message from the Editor-in-Chief

*Electronics* is a multidisciplinary journal designed to appeal to a diverse audience of research scientists, practitioners, and developers in academia and industry. The journal is devoted to fast publication of latest technological breakthroughs, cutting-edge developments, and timely reviews of current and emerging technologies related to the broad field of electronics. Experimental and theoretical results are published as regular peer-reviewed articles or as articles within Special Issues guest-edited by leading experts in selected topics of interest.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), CAPlus / SciFinder, Inspec, and other databases.

**Journal Rank:** JCR - Q2 (*Physics, Applied*) / CiteScore - Q2 (*Control and Systems Engineering*)
