

# Joint Special Issue

## Advances in Autonomous Control Systems and Their Applications: 2nd Edition

### Message from the Guest Editors

This Special Issue focusses on emerging control, sensing, dynamic modelling, and system identification methodologies and applications related to autonomous and semi-autonomous maritime, aerial, and terrestrial vehicles both in military and civilian domains. We aim to seek high-quality submissions reporting research and real applications covering topics including, but not limited to, the following:

- Advanced control methodologies for autonomous vehicles;
- Sensing for autonomous vehicles;
- Modelling and system identification for the autonomous control of vehicles;
- Applications to autonomous and semi-autonomous under-water vessels, surface vessels, aerial vehicles, and ground vehicles.

Welcome to your contribution.
