Deadline for manuscript  
submissions:

**closed (30 April 2024)**

### Message from the Guest Editors

Dear Colleagues,

Wind turbines are widely used due to their environmental friendliness. More than 10% of electricity in Europe is provided by the wind power industry. The growing use of wind turbines causes serious noise problems to the community, especially for modern wind turbines with large diameters of more than 150 m. The two main aerodynamic noise sources of wind turbines are the trailing edge noise generated by the interaction of boundary layer turbulence with the trailing edge of an airfoil, and the leading edge noise generated by the interaction of inflow turbulence with the leading edge of an airfoil. The control of wind turbine noise is a challenging task due to its broadband characteristics. However, to further increase the rotor diameter and improve the wind energy capture efficiency, it is urgent to conduct systemic research and develop advanced noise control methods for wind turbines.

This Special Issue aims to present and disseminate the most recent advances related to this research and the methods of noise control for wind turbines.

## Message from the Editor-in-Chief

*Energies* is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

**Journal Rank:** CiteScore - Q1 (Control and Optimization)
