Horticulture and Landscape
Architecture, Environmental
Horticulture, Dankook University,
Cheonan 31116, Republic of
Korea

Deadline for manuscript
submissions:

31 December 2024

Message from the Guest Editors

Dear Colleagues,

Environmental pollution poses a significant threat to civilization and fossil fuel usage is one of the principal sources of pollution. To combat this, the identification of renewable energy has become a global priority. While renewable energy sources such as biofuel, solar and wind power, and geothermal energy are available, it is challenging to implement them due to high implementation costs. Therefore, it is crucial to utilize modelling techniques to predict the performance of renewable energy systems in terms of practicality, energy generation capacity, and monetary benefit.

This Special Issue focuses on simulation modelling and analysis for renewable energy management. We invite you to submit original research papers and critical review papers to our Special Issue in *Energies* on the topic "Simulation Modelling and Analysis of a Renewable Energy System". We welcome simulation modelling techniques such as discrete event simulation, system dynamics, agent-based simulation, and artificial intelligence for better renewable energy management.

Eudossiana 18, 00184 Roma, Italy

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Control and Optimization)
