## Modeling and Optimization Research of Integrated Energy Power System

Guest Editors:

**Prof. Dr. Peiguang Wang**

College of Electronic Information Engineering, Hebei University, Baoding 071002, China

**Dr. Zhaoyan Zhang**

College of Mathematics and Information Science, Hebei University, Baoding 071002, China

**Prof. Dr. Changliang Liu**

School of Control and Computer Engineering, North China Electric Power University, Baoding, China

Deadline for manuscript submissions:

**closed (29 February 2024)**

### Message from the Guest Editors

At present, the situation of climate change is becoming more and more serious. The world energy pattern is changing. The task of reducing emissions is arduous. It is necessary to build an integrated energy power system centered on renewable energy. An integrated energy power system includes a variety of energy production, transmission and storage methods. The integrated energy power system has a complex structure and a variety of equipment and has typical nonlinear random characteristics and multi-scale dynamic characteristics. The traditional mechanism model analysis and optimal control methods have been difficult to meet the requirements of operation optimization, planning and design, multi-energy prediction and cooperative control of integrated energy power system.

This Special Issue aims to bring together studies describing recent advances in integrated energy power system modeling and simulation, optimal operation and scheduling, architecture design and optimal planning, multi-energy prediction and collaborative control. We welcome contributions from academia and industry in the aforementioned fields.

## Message from the Editor-in-Chief

*Energies* is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

**Journal Rank:** CiteScore - Q1 (Control and Optimization)
