

Investigations of Heat Transfer with Estimation of Temperature Uncertainty Measurements

Guest Editor:

Prof. Dr. Magdalena Piasecka

Faculty of Mechatronics and
Mechanical Engineering, Kielce
University of Technology, Al.
Tysiaclecia Panstwa Polskiego 7,
25-314 Kielce, Poland

Deadline for manuscript
submissions:

14 November 2024

Message from the Guest Editor

The transfer of large heat fluxes is one of the most significant issues with modern technology. In recent years, the range of applications for heat transfer has broadened considerably, including new systems. Theoretical analyses, experimental measurements, and practical applications have been performed to help us understand heat and mass transfer phenomena. The results of these studies provide us with information about the design of cooling systems for cooling, thermostabilization, and thermoregulation. Moreover, it should be underlined that statistical data on temperature measurements are needed to ensure that heat transfer results based on experiments are reliable.

Topics of interest include:

- Heat and mass transfer problems also with change of phase;
- Heat transfer enhancement;
- Multiphase flow;
- Unsteady flow and instabilities;
- Methods for identifying two-phase flow structures;
- Computational methods for solving heat and mass transfer problems;
- Prediction of correlations between heat transfer and pressure drops;
- Practical applications.

Aerospace Engineering,
University of Roma Sapienza, Via
Eudossiana 18, 00184 Roma, Italy

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Control and Optimization)
