Message from the Guest Editor

Dear Colleagues,

As one of the major applications of the promising energy storage vector-hydrogen, fuel cell can produce electricity without emitting pollutants or greenhouse gases. Fuel cell systems can be used in a wide range of applications, such as portable, transportation, and stationary utilizations. The excessive use of energy has pushed forward the research in the area of energy storage and fuel cell systems as the energy application.

This Special Issue aims to present and disseminate the most recent advances related to the theory, design, modelling, control, and application of all types of energy storage and fuel cell systems.

Topics of interest for publication include, but are not limited to:

- All kinds of chemical energy storage, physical energy storage and fuel cell, among others;
- Hydrogen energy;
- Energy efficiency;
- Fuel cell system and its application;
- Applications of energy storage.

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Control and Optimization)
