Artificial Intelligence for Power Electronics and Energy Systems Applications

Guest Editors:

Dr. Junho Hong

College of Engineering and
Computer Science, University of
Michigan – Dearborn, Dearborn,
MI 48128, USA

Dr. Chih-Che (Ryan) Sun

Distribution Grid Engineer,
Computational Engineering
Division, Lawrence Livermore
National Laboratory, Livermore,
CA 94550, USA

Deadline for manuscript
submissions:

closed (20 April 2023)

Message from the Guest Editors

Dear Colleagues,

In modern society, artificial intelligence (AI) is being used in various industries and has brought about significant benefits. With this in mind, the Guest Editor is inviting submissions to a Special Issue of *Energies* on the topic of “Artificial Intelligence for Power Electronics and Energy Systems Applications.” It is crucial to predict how AI can be used to accelerate a more equitable energy transition throughout the industry and how our trust in this technology can be strengthened. In the energy sector, research on how to efficiently manage and utilize energy sources for power electronics-based distributed energy resources (DERs) is required. In addition, it is expected that the role of AI will increase in the construction of large-scale infrastructures, such as the management of the energy demand for transportation and buildings, and the construction of smart cities and smart grids. In particular, the efficient energy use and reduction using AI in autonomous vehicles are expected to make a significant contribution to increasing driving distance.

Aerospace Engineering,
University of Roma Sapienza, Via
Eudossiana 18, 00184 Roma, Italy

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Control and Optimization)
