Message from the Guest Editors

As in many other fields, energy and water demand researchers are starting to make use of 'big' and 'linked' data to address challenges critical to the sustainability of human society on our planet. This Special Issue is looking for papers that review or present state-of-the-art big and linked data practices, novel and actionable insights from the use of such data and grounded, review-based agendas for future research. All papers, but especially the latter, should include nuanced discussions of conceptual and practical definitions of 'big' and/or 'linked' data and also situate themselves in ongoing discussions of the benefits, disadvantages, limitations and appropriate granularities of such data.

Special Issue

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.
Journal Rank: CiteScore - Q1 (Control and Optimization)
