Deadline for manuscript
submissions:

closed (20 June 2021)

Message from the Guest Editors

Dear Colleagues,

City, regional and national governments around the world continue to embrace the implementation of the sustainable development goals (SDGs) and the role for clean, efficient and low carbon energy (SDG 7) within this. There remains however much that we do not know about the most viable ways of achieving this, especially given the variation in local conditions, constraints and opportunities.

In this special issue we are interested in receiving papers that explore different perspectives on, and approaches to, the potential of low carbon pathways to support more sustainable communities. We are keen to attract papers that present research into technical, behavioural and policy based low carbon initiatives in a range of socio-cultural, geographical and economic community contexts. Contributions may include reference to smart cities, to the future-proofing of urban and rural communities and infrastructure and to community-based low carbon initiatives...

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Control and Optimization)
