Message from the Guest Editors

This Special Issue aims to collect research papers, short communications, and review articles that focus on advances in structures and models of devices that participate in the deployment of renewable energies and electrification of transport, such as solar cells, thermoelectric devices, supercapacitors, battery cells, fuel cells, photoelectrochemical devices and electrolyzers, that could showcase the current state of research in this wide area.

Keywords:

- Solar cells
- thermoelectric devices
- batteries
- supercapacitors
- fuel cells
- photoelectrochemical cells
- electrolyzers
- solar-hydrogen systems
- electrification of transport

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.
Journal Rank: CiteScore - Q1 (Control and Optimization)
