Message from the Guest Editors

Dear Colleagues,

Financial energy is an interdisciplinary concept. Its importance is emphasized in energy and financial markets, pricing mechanisms, energy corporate finance, green finance and investment, energy derivative markets, energy risk management.

Agriculture is an area around which many of the Sustainable Development Goals concentrate. Farms are an important link in the food supply chain; therefore, their efficiency affects the global level of poverty and directly contributes to the exploitation or protection of natural resources of each country.

The aim of the research that will be presented in this Special Issue is, therefore, to show the importance of financial energy in the processes of farm development, with particular emphasis on sustainable agriculture. The scope of the Special Issue mainly covers the assessment of the implementation of financial energy in agriculture.

The research results presented in the Special Issue may be used by institutions supporting the sustainable development of farms through the use of financial energy.

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Control and Optimization)
