submissions:
closed (20 August 2021)

Message from the Guest Editor

Dear Colleagues,

The last few years have seen a resurgence of hydrogen as an energy carrier, especially for mobile applications such as cars, trucks, and trains. Hydrogen storage is a key component in all of these applications, but the requirements in terms of the pressure and temperature of operation, as well as cost, may be quite different. Storing hydrogen solid materials has many advantages over the conventional means of storage of high-pressure and liquid. The main ones being the high volumetric density at a near-ambient temperature, high purity of the released hydrogen, low cost, and inherent safety.

The goal of this Special Issue is to assemble original researches or review articles on the materials for hydrogen storage.

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Control and Optimization)
