Deadline for manuscript
submissions:

closed (30 April 2023)

Message from the Guest Editors

Electric circuit theory provides essential notions for electrical engineering. By knowing and understanding the basic theory of electrical phenomena, the operation of the components, the theorems connecting the electrical quantities and the particular phenomena that occur in different regimes, the operation of electrical and electronic devices, automation systems, and power supply networks can be better understood. Therefore, electrical circuits, whether linear or nonlinear, with lumped or distributed parameters, are found in many engineering subdomains: electrical and electronic engineering (principally), power engineering, transportation engineering, telecommunications, automation and hardware systems, etc. On the other hand, the relations between electrical quantities, transposed into systems of algebraic or differential equations, cannot be solved correctly without the involvement of specialists in mathematics. So the issues of electrical circuits can be divided into two main directions, including, but not limited to, the following: Theoretical aspects regarding linear and nonlinear electrical circuits and Applications of electrical circuits.

Department of Mechanical and Industrial Engineering, University Niccolò Cusano, 00166 Roma, Italy

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compindex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Control and Optimization)
