Message from the Guest Editor

Dear Colleagues,

Fuel cells are electrochemical, environmentally friendly appliances operating in clean, simple, and efficient conditions, which aim to convert chemical energy into electricity. With the technological surge in the field of information science, electronic miniaturization, and the continuing need for mobility, there have been growing demands for portable energy sources, such as fuel cells. Great achievements are reported on this matter, especially in terms of highly selective proton conductivity, extraordinary mechanical and chemical resistance, lower costs, and environmentally friendly characteristics.

Therefore, we believe that a Special Issue of the most recent research papers dealing with natural polymers as a key material for fuel cell applications can benefit the scientific community.

Potential topics include, but are not limited to:

- Proton exchange membranes;
- Cellulose-based membranes for fuel cell;
- Proton conductivity;
- Biobased membranes;
- Supramolecular architectures for ionic conductivity;

Dr. Sergiu Coseri

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compindex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Control and Optimization)
