Advanced Solutions for Monitoring, Protection and Control of Modern Power Transmission System

Guest Editor:

Dr. Srđan Skok

Department of Electrical
Engineering, University North,
42000 Varaždin, Croatia

Deadline for manuscript
submissions:

closed (15 April 2021)

Message from the Guest Editor

The aim of this Special Issue is to present advanced and innovative technical solutions, which will emphasize the monitoring, protection, and control of the modern transmission system. More specifically, topics of interest for this Special Issue include (but are not limited to) the following:

Power system monitoring, protection, and control;
Transmission grid planning, forecasting, and operation;
Industry experience in deploying smart grid technologies for power transmission;
Information and communication technologies for smart grids, interoperability, and cyber-security;
Interoperability between the transmission system operator and distribution system operator;
System integration of distributed energy resources, islanding, and hosting capacity;
Transmission system technologies, HVDC, FACTS, SVC, and energy storage;
Power electronics and control and protection systems for transmission grid applications;
Transmission grid monitoring and advanced metering infrastructures;
Diagnostics, maintenance, risks, reliability, vulnerability, and self-healing of transmission grids;
Smart transmission grid impacts on electricity markets; et al.

Department of Mechanical and
Aerospace Engineering,
University of Roma Sapienza, Via
Eudossiana 18, 00184 Roma, Italy

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Control and Optimization)
