Institute of Fluid-Flow Machinery
PAS-cj, Fiszerza 14 st., Gdansk 80-
283, Poland

Deadline for manuscript
submissions:

closed (23 November 2022)

Message from the Guest Editors

Currently, countries requiring heating face the challenge of the decarbonisation of heating systems, and so a natural way of development is to adapt the existing heating infrastructures to cooperation with renewable energy sources. This Special Issue's concept is that direct electric heating should be the last resort and, for this reason, we should strive for the effective cooperation of technology based on the combustion of fuels with renewable energy sources, taking into account the present and future frontiers in renewable energy-driven combined heat and power generation. Therefore, we turn to the scientific community regarding this subject with a kind request to share your observations, experiences, and research results in the form of articles in this Special Issue of *Energies*.

Eudossiana 18, 00184 Roma, Italy

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Control and Optimization)
