Deadline for manuscript
submissions:

15 December 2024

Message from the Guest Editor

Over recent decades, distribution networks have faced several changes; among them, the widespread installation of distributed sensors and SCADA systems is enabling operators improving voltage control in networks. The development of these new levers for DSO is needed to allow for the growth of distributed generation from fluctuating energy resources, the electrification of consumption, and the widespread use of electric vehicles.

The motivation for this Special Issue lies in the need to collect the most recent and advanced studies on voltage control and optimization for power distribution networks. We invite all interested colleagues to contribute their state-of-the-art review papers or latest studies related to this topic.

Topics of interest for publication include, but are not limited to, the following:

- Innovative voltage regulation frameworks;
- Optimization methods for voltage control;
- Distributed energy resources for voltage regulation;
- Flexibility energy resources for voltage regulation;
- Optimal reactive power planning;
- Voltage regulation schemas among network codes.

Eudossiana 18, 00184 Roma, Italy

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Control and Optimization)
