Deadline for manuscript submissions:  
**closed (31 March 2021)**

### Message from the Guest Editors

You are kindly invited to submit a paper for a Special Issue on “Thermal Analysis of the Biomass Energy Production Process”.

Energy can be considered as the beginning of human lives from a holistic point of view. However, our energy conventional systems, based on fossil fuels, have two serious problems, namely: they are not infinite, and they also have serious environmental impacts. It is expected that the great energy revolution (based on the use of hydrogen) will be reached, not before one hundred years. Thus, new energy sources must be used before this. Biomass can be one of the most important options for this change. Nevertheless, this energy source requires great knowledge from the scientific community. This Special Issue will explore the following topics: (a) how energy can be obtained from different biomass sources, (b) how is the thermal behavior of these biomasses studied by their thermal analysis, and (c) how can we optimize the different energy production processes...

## Message from the Editor-in-Chief

*Energies* is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

**Journal Rank:** CiteScore - Q1 (Control and Optimization)
