Thermal Response Tests for Shallow Geothermal Systems

Guest Editors:

Prof. Dr. Diego González-Aguilera

Cartographic and Land Engineering Department, Higher Polytechnic School of Avila, University of Salamanca, Hornos Caleros, 50 05003 Avila, Spain

Dr. Cristina Sáez Blázquez

Department of Cartographic and Terrain Engineering, Universidad de Salamanca, 37008 Salamanca, Spain

Dr. Ignacio Martín Nieto

Department of Cartographic and Terrain Engineering, Universidad de Salamanca, 37008 Salamanca, Spain

Deadline for manuscript submissions:
closed (31 March 2023)

Message from the Guest Editors

Geothermal energy has become essential in the current energy sector, as it is the only renewable source independent of solar radiation and/or the gravitational attraction of the sun and moon. This energy is especially important in the heating and cooling sector by use of low enthalpy geothermal resources. However, without an effective thermal characterization of the ground, the correct and continuous operation of the geothermal system is difficult to achieve. In this context, thermal response tests (TRTs) are commonly used in the determination of the surrounding ground thermal conductivity. The implementation of these tests means an important improvement of the global system operation, at the same time involving a high increase of the initial investment.

This Special Issue aims to collect original research or review articles on different solutions and devices focused on the thermal characterization of the ground. Different variations of the traditional thermal response tests will be considered for publication in this Special Issue.

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Control and Optimization)
