Engineering, Jeonbuk National  
University, Jeonju 54896, Korea

Deadline for manuscript  
submissions:

**21 August 2024**

### Message from the Guest Editor

Secondary batteries are rechargeable batteries that transform electrical energy into chemical energy and vice versa. These batteries are widely deployed in a wide range of applications, from miniaturized devices to high-power-driven electric vehicles. Since the inception of Li-ion batteries, remarkable progress has been made to meet the needs of the energy-starving world. However, the popular Li-ion batteries have reached a limit in their energy density and power density. Therefore, the latest developments in the other secondary-type batteries have drawn the scientific community's attention. These advancements allow inexpensive and efficient energy storage solutions. The current Special Issue aims to present and disseminate the most recent advances in battery science and engineering, the chemistry of the secondary batteries, and novel electrode and electrolyte configurations.

The scope of publication includes, but is not limited to, the following: the latest advancements in Li-ion battery, Li-S battery, Li-air battery, all-solid-state battery, redox flow battery, Na-ion battery, Li-CO<sub>2</sub> battery, and battery waste and recycling.

Aerospace Engineering,  
University of Roma Sapienza, Via  
Eudossiana 18, 00184 Roma, Italy

## Message from the Editor-in-Chief

*Energies* is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

**Journal Rank:** CiteScore - Q1 (Control and Optimization)
