Application of Functionalized Graphene and Other 2D Derivatives in Energy Storage and Conversion Systems

Guest Editor:

Prof. Dr. Boštjan Genorio

University of Ljubljana, Faculty of Chemistry and Chemical Technology, Vecna pot 113, SI-1000 Ljubljana, Slovenia

Deadline for manuscript submissions:

closed (31 March 2022)

Message from the Guest Editor

Dear Colleagues,

This Special Issue is dedicated to the original research papers that relate to inactive or active graphene-based materials and functionalized graphene derivatives used in energy storage and conversion systems. In addition, research studies on other 2D materials and their derivatives in energy storage and conversion systems are also welcome. Li-ion and beyond Li-ion batteries, fuel cells, supercapacitors, microbial fuel cells are a few examples of the energy storage and conversion systems that are of great interest. However, other energy storage and conversion systems will also be considered.

Prof. Dr. Boštjan Genorio

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Control and Optimization)
