Hybrid Energy Storage Systems Based on Liquid Air and Compressed Air

Guest Editor:

Prof. Dr. Tatiana Morosuk

Institute for Energy Engineering,
Technische Universität Berlin,
Marchstr. 18, 10587 Berlin,
Germany

Deadline for manuscript
submissions:

closed (1 October 2020)

Message from the Guest Editor

The globalisation of the electrical grid through the wide introduction of renewable energy sources (available locally), as well as the demand for a high flexibility of the electrical grid, associated with new technologies that are purely dependent on electricity (electro mobility, smart buildings, smart cities, digitalization, etc.), requires economically and environmentally effective solutions. Industrial-scale energy storage systems have become an important element in modern energy supply chains. These energy storage systems have great potential for improvement, as both individual technologies and as the part of complex and hybrid systems. Research contributions in the area of developing; improving; and the rational application, evaluation, and optimization of the liquid air and compressed air energy storage systems are invited. These research publications should address, but are not limited to, the following: thermodynamic (exergy) analysis; round trip efficiency; evaluation of the available technologies and their limitations; economic and ecological impacts; multi-criteria evaluation; and optimization.

Department of Mechanical and
Aerospace Engineering,
University of Roma Sapienza, Via
Eudossiana 18, 00184 Roma, Italy

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Control and Optimization)
