submissions:

closed (31 October 2021)

Message from the Guest Editor

Dear Colleagues,

The sensorless control of electrical machines, especially in the low-speed region, has gained a lot of importance over the years. The initial sensorless techniques were model-based, following this, for low- and zero-speed operation, saliency tracking techniques were introduced. Such saliency tracking for speed and position estimation can be carried out by various methods, some which use additional frequency injection and others which analyse in real time the saliency dependent currents resulting from inherent PWM switching frequencies.

The topics of interest for publication include, but are not limited to:

- Techniques using additional signal injection for sensorless position and speed estimation;
- Application of PWM switching for sensorless position and speed estimation;
- Electrical machine design for sensorless control;
- Industrial applications of sensorless control in electric drives;
- Self-commissioning electric drives;
- Application of sensorless techniques for condition monitoring in electric machines;
- High-performance sensorless control techniques.

Eudossiana 18, 00184 Roma, Italy

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Control and Optimization)
