Manufacturing Energy Efficiency and Industry 4.0

Guest Editors:

Prof. Dr. Konstantinos Salonitis

Sustainable Manufacturing Systems Centre, School of Aerospace Transport and Manufacturing, Cranfield University, Cranfield MK43 0AL, UK

Dr. Christos Emmanouilidis

Through-life Engineering Services Institute, Manufacturing Department, School Of Aerospace, Transport and Manufacturing Building 50, Cranfield University, Cranfield, Bedfordshire MK43 OAL, UK

Deadline for manuscript submissions:

closed (31 October 2021)

Message from the Guest Editors

Energy efficiency in manufacturing systems and processes will carry on being a key research topic. Research in the energy efficiency of manufacturing in the last decade has resulted in very promising improvements. While designtime energy efficiency considerations have received considerable attention, operating time efficiency is now benefitting from the increasingly adoption implementation of Industry-4.0-enabling technologies. The Industrial Internet of Things (IIoT), the upgrade of manufacturing facilities into industrial cyber physical systems (ICPS), and the efficient exploitation of manufacturing and process monitoring data through Machine advanced Learning present opportunities towards more responsive, smarter, and more energy-efficient manufacturing.

This Special Issue considers the energy efficiency of both manufacturing processes and systems and how these can be improved by the use of Industry-4.0-enabling technologies.

Editor-in-Chief

Prof. Dr. Enrico Sciubba

Department of Mechanical and Aerospace Engineering, University of Roma Sapienza, Via Eudossiana 18, 00184 Roma, Italy

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Control and Optimization)
