Technology, Central Queensland  
University, Perth, WA 6000,  
Australia

Deadline for manuscript  
submissions:

**closed (20 December 2021)**

### Message from the Guest Editor

While there is an ever-increasing effort towards achieving zero-emission energy generation systems, there are still various concerns regarding the satisfactory integration of renewable energy resources. This is mainly due to the intermittent nature and fluctuation of such energy resources. Moreover, attempts to achieve stable operation are met with further challenges caused by the dispersed nature of renewable energy generators. There is a great need for these concerns to be properly addressed through the development of more efficient planning and operational methods. This *Special Issue* aims to cover technical issues in the planning and operation of renewable energy systems (RESs) to promote clean energy utilization while improving energy efficiency. Topics of interest include but are not limited to the following:

- Optimal methods in both planning and operation of RESs;
- Efficient strategies for dynamic evaluation of RESs;
- Small signal and large signal stability analysis of RESs;
- Appropriate protection scheme for RESs;
- Reliability considerations in both planning and operation of RESs;
- Challenges with RESs in off-grid microgrids;
- Power electronics interfaces for RESs.

Eudossiana 18, 00184 Roma, Italy

## Message from the Editor-in-Chief

*Energies* is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

**Journal Rank:** CiteScore - Q1 (Control and Optimization)
