## Power Electronics for Energy Storage

Guest Editor:

**Prof. Dr. Eric Cheng**

Department of Electrical  
Engineering, The Hong Kong  
Polytechnic University, Hong  
Kong, China

Deadline for manuscript  
submissions:

**closed (31 August 2018)**

### Message from the Guest Editor

Energy storage, including batteries, super-capacitors, superconductor magnetics and fuel cells, are common types used in power electronics systems. They may be used alone, combined with one or more energy storage types, or even in the form of chemical or material combined energy storage. Today, most mobility systems, such as electric vehicle, electric vessel and more electric aircrafts, use certain amounts of energy storage devices. Renewable energy sources are usually either connected to grids or use energy storage units for storage. Even buildings, power distribution, and power systems also use energy storage devices for power backup, power compensation and energy buffers. All of them also need power electronic converters to assist power conditioning, charging and discharging for energy storage.

This Special Issue aims to provide an opportunity for us to propose, discuss and publish new findings in energy storage using power electronics methods. Your contribution may describe new theories, modelling, characterizations, improvements, topology, control methods, and applications. I am looking forward to receiving your submissions.

Aerospace Engineering,  
University of Roma Sapienza, Via  
Eudossiana 18, 00184 Roma, Italy

## Message from the Editor-in-Chief

*Energies* is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

**Journal Rank:** CiteScore - Q1 (Control and Optimization)
