

## Simulation and Optimization of Electrotechnical Systems

Guest Editor:

**Prof. Philippe Dessante**

Laboratoire Génie Électrique et  
Électronique de Paris, 91190 Gif-  
sur-Yvette, France

Deadline for manuscript  
submissions:

**closed (28 February 2022)**

### Message from the Guest Editor

Understanding and finding the best solution for a given electrical problem is a big trend in contemporary research. For several years now, there has been a growing demand for electrification, which must meet regulatory and environmental constraints, be increasingly efficient and lightweight, and fulfil new functions.

More and more, the system aspect is considered from the design phase. System design and modeling must focus on the behavioral understanding of components, but also, and above all, on the interactions between them and the couplings between the models of each component.

The aim of this Special Issue is to compile the latest research on system modeling, simulation, and optimization techniques: development, characterization, and use of meta-models, multidomain and multiscale modeling, simulations from these models, system optimization. Concrete examples of implementation in modeling or optimal design of electrotechnical systems are also encouraged: hybridization, isolated electrical systems, electrical networks, electric propulsion and motorization, coupling of one or more components of power storage, electronics, motorization, mechanical transformation, EMC...

Aerospace Engineering,  
University of Roma Sapienza, Via  
Eudossiana 18, 00184 Roma, Italy

## Message from the Editor-in-Chief

*Energies* is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

**Journal Rank:** CiteScore - Q1 (Control and Optimization)
