

Smart Grid Cybersecurity: Challenges, Threats and Solutions

Guest Editors:

Dr. Basile L. Agba

Hydro-Quebec Research
Institute, Varennes, PQ G1A 1A1,
Canada

Dr. Marthe Kassouf

Institut de recherche d'Hydro-
Quebec, Varennes, QC J1J2S9,
Canada

Prof. Dr. Mourad Debbabi

Concordia Institute for
Information Systems
Engineering, Concordia
University, Montreal, QC H3G 2M4,
Canada

Deadline for manuscript
submissions:

closed (10 April 2023)

Message from the Guest Editors

The next generation of Electric Grids relies on an invasive deployment of communication and information technologies (IT) in multiple systems spread across the large infrastructure that interconnects the consumer premises and the electricity distribution, transmission and generation facilities.

Recent reports confirm that cyberattacks targeting power grids and other critical infrastructures have been increasing in frequency and severity. In this context, smart grid operators and the electricity industry stakeholders are required to design and implement novel solutions to enhance the grid resilience and the capability to detect, neutralize and respond to cyberattacks.

The proposed papers consist of novel and original ideas and results, theoretical and applied research in the following topics, but not limited to:

- Smart grid risk management
- Security metrics and resilience assessment
- Security policy development
- Cyberattack simulation and case studies
- Detection and mitigation of cyberattacks
- Cybersecurity investments and the economic impact of cyberattacks
- Privacy challenges

Eudossiana 18, 00184 Roma, Italy

Message from the Editor-in-Chief

Energies is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: CiteScore - Q1 (Control and Optimization)
