Deadline for manuscript  
submissions:

**closed (20 February 2023)**

### Message from the Guest Editors

Dear Colleagues,

Turbines are key components of several engineering flow devices, such as aircraft engines and wind turbines. Harnessing the flow's kinetic energy to generate optimal power depends on several factors, including the complex interaction between oncoming fluid and turbine, blade shape and size, and the condition of the blades themselves. In this regard, computational fluid dynamics (CFD) has been a vital tool for predicting turbine aerodynamics. However, as the scale and complexity of turbines grow rapidly, there is increasing demand for developing advanced CFD tools to better predict flow and turbine blade interaction, and to optimize blade design for improved efficiency. This Special Issue will cover novel modeling and numerical techniques for turbine aerodynamics.

## Message from the Editor-in-Chief

*Energies* is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compindex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

**Journal Rank:** CiteScore - Q1 (Control and Optimization)
