## Flow and Transport Properties of Unconventional Reservoirs

Guest Editors:

**Prof. Dr. Jianchao Cai**

College of Geosciences, China  
University of Petroleum, Beijing  
102249, China

**Prof. Dr. Qinjun Kang**

Computational Earth Science  
Group, Earth and Environmental  
Sciences Division, Los Alamos  
National Laboratory, Los Alamos,  
NM 87545, USA

**Dr. Harpreet Singh**

The University of Texas at Austin,  
Austin, TX 78705, USA  
National Energy Technology  
Laboratory, Morgantown, WV  
26505, USA

Deadline for manuscript  
submissions:

**closed (20 December 2017)**

### Message from the Guest Editors

Unconventional reservoirs have received a great deal of attention in recent years. A better understanding of the nano- and micro-scale structures of these reservoir rocks, and their transport properties, are critical for improving the efficiency of these energy systems. Due to the complexity of unconventional rocks, and the strong interactions between fluids and pore surfaces due to the reduced dimensionality, conventional approaches are typically not applicable to fluid flow in these porous reservoir rocks. Therefore, the accurate characterization of rocks with nano- to micro-scale pores is challenging and of great importance.

We invite investigators to submit original research articles, as well as review articles, which will stimulate the continuous efforts on new and modern methods and techniques for rock characterization and reconstruction, as well as on understanding mechanisms involved in transport physics of tight and ultra-tight porous media and unconventional rocks.

## Message from the Editor-in-Chief

*Energies* is an international, open access journal in energy engineering and research. The journal publishes original papers, review articles, technical notes, and letters. Authors are encouraged to submit manuscripts which bridge the gaps between research, development and implementation. The journal provides a forum for information on research, innovation, and demonstration in the areas of energy conversion and conservation, the optimal use of energy resources, optimization of energy processes, mitigation of environmental pollutants, and sustainable energy systems.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, RePEc, Inspec, CAPlus / SciFinder, and other databases.

**Journal Rank:** CiteScore - Q1 (Control and Optimization)
