Message from the Guest Editors

Delay-Doppler (DD) domain communications have demonstrated appealing advantages in meeting the stringent requirements for future wireless communications. A typical example is the orthogonal time frequency space (OTFS) modulation that was proposed by Prof. Hadani et al. in 2017. The related design, analysis, and application of DD domain communications have received significant attention from both theoretical and practical viewpoints, where many recent advances have been reported. Those advances are usually built on the application of communication theory, signal processing, and information theory in the DD domain.

The distinct feature of DD domain wireless channels motivates many novel DD domain designs. Further progress on this front call for full exploitation on the DD domain channel, innovative adaption of conventional communication approaches, and improved understanding of communication theory, signal processing, and information theory. The main objective of this SI is to exploit the new opportunities of DD domain communications for future wireless networks by collecting new ideas, latest findings, state-of-the-art results, and comprehensive surveys of DD domain communications.

Message from the Editor-in-Chief

The concept of entropy is traditionally a quantity in physics that has to do with temperature. However, it is now clear that entropy is deeply related to information theory and the process of inference. As such, entropic techniques have found broad application in the sciences.

Entropy is an online open access journal providing an advanced forum for the development and/or application of entropic and information-theoretic studies in a wide variety of applications. *Entropy* is inviting innovative and insightful contributions. Please consider *Entropy* as an exceptional home for your manuscript.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [Inspec](#), [PubMed](#), [PMC](#), [Astrophysics Data System](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Physics, Multidisciplinary*) / CiteScore - Q1 (Mathematical Physics)
