

## Quantum Game Theory and Its Applications

Guest Editors:

**Prof. Dr. Constandio Arizmendi**

Instituto de Investigaciones Científicas y Tecnológicas en Electrónica (ICYTE), Av. Juan B. Justo 4302, Mar del Plata B7608, Argentina

**Dr. Omar Gustavo Zabaleta**

ICYTE, Facultad de Ingeniería, Universidad Nacional de Mar del Plata, Mar del Plata 7600, Argentina

**Dr. Karina Irma Mazzitello**

Centro Atómico Bariloche, CONICET, 8400 S. C. de Bariloche, Río Negro, Argentina

Deadline for manuscript submissions:

**30 September 2024**

### Message from the Guest Editors

Quantum technologies are now able to be commercially utilized and quantum mechanics is becoming a relevant topic for both engineers and the public. IBM and Google have already built prototypes of quantum computers, and quantum networks might be a reality in the near future. Advances in quantum information processing open up new opportunities, and the development of quantum technology uncovers new possibilities in terms of its utilization in the optimization of decision-making processes by means of quantum games.

Quantum games extend classical game theory to the quantum domain, in which entanglement and nonlocality generate behaviors different to their classical versions, which frequently leads players to achieve better outcomes in equilibria. The key to achieving a quantum advantage is in the nonlocal correlations generated by local measurements in the shared entangled states. In the last 20 years, numerous quantum game-based applications have been developed in a variety of fields, including communications, cryptography, finance, and computer science. These and many more features related to quantum game theory and its application can be included in this Special Issue.

at Albany, 1400 Washington  
Avenue, Albany, NY 12222, USA

## Message from the Editor-in-Chief

The concept of entropy is traditionally a quantity in physics that has to do with temperature. However, it is now clear that entropy is deeply related to information theory and the process of inference. As such, entropic techniques have found broad application in the sciences.

*Entropy* is an online open access journal providing an advanced forum for the development and/or application of entropic and information-theoretic studies in a wide variety of applications. *Entropy* is inviting innovative and insightful contributions. Please consider *Entropy* as an exceptional home for your manuscript.

## Author Benefits

**Open Access:** free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High Visibility:** indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [Inspec](#), [PubMed](#), [PMC](#), [Astrophysics Data System](#), and [other databases](#).

**Journal Rank:** JCR - Q2 (*Physics, Multidisciplinary*) / CiteScore - Q1 (Mathematical Physics)
