Deadline for manuscript submissions:

**closed (15 June 2025)**

### Message from the Guest Editors

Model selection has always been a popular topic in the statistics literature. Information-theoretic criterion is one popular approach for selecting the best statistical model for a given dataset. Some well-known information-theoretic criteria are Akaike Information Criterion (AIC), Bayesian Information Criterion (BIC), Mallow's Cp statistic, etc. These criteria are based on the principle of minimizing information loss when describing the data through a model. They are particularly useful when comparing models with different structures, as they provide a quantitative measure of the trade-off between model accuracy and complexity. Information-theoretic criteria are widely used for model selection in various fields, including physics, engineering, finance, statistics, and data science.

This Special Issue aims to highlight the versatility and importance of information-theoretic criteria for model selection. We welcome newly developed statistical methods that demonstrate the practicality and effectiveness of these criteria in different fields.

## Message from the Editor-in-Chief

The concept of entropy is traditionally a quantity in physics that has to do with temperature. However, it is now clear that entropy is deeply related to information theory and the process of inference. As such, entropic techniques have found broad application in the sciences.

*Entropy* is an online open access journal providing an advanced forum for the development and/or application of entropic and information-theoretic studies in a wide variety of applications. *Entropy* is inviting innovative and insightful contributions. Please consider *Entropy* as an exceptional home for your manuscript.

## Author Benefits

**Open Access:** free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High Visibility:** indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [Inspec](#), [PubMed](#), [PMC](#), [Astrophysics Data System](#), and [other databases](#).

**Journal Rank:** JCR - Q2 (Physics, Multidisciplinary) / CiteScore - Q1 (Mathematical Physics)
