Deadline for manuscript
submissions:

closed (18 May 2022)

Message from the Guest Editor

The crisis of the COVID-19 pandemic represents a tremendous challenge for the scientific community. It has fostered the development of new approaches in all fields of science to understand the disease and mitigate its propagation. One of the key issues is related to propagation modeling and dynamics characterization. Population behavior, governmental non-drug control measures, and the appearance of virus mutations and variants implies a complex behavior that makes propagation forecasting and dynamics characterization very difficult.

The aim of this Special Issue is to present surveys as well as original and recent developments focusing on how entropy-based approaches can be used to properly address the previously mentioned open topics. The contributions can be theoretical or applied, based on data series.

Department of Physics, University
at Albany, 1400 Washington
Avenue, Albany, NY 12222, USA

Message from the Editor-in-Chief

The concept of entropy is traditionally a quantity in physics that has to do with temperature. However, it is now clear that entropy is deeply related to information theory and the process of inference. As such, entropic techniques have found broad application in the sciences.

Entropy is an online open access journal providing an advanced forum for the development and/or application of entropic and information-theoretic studies in a wide variety of applications. *Entropy* is inviting innovative and insightful contributions. Please consider *Entropy* as an exceptional home for your manuscript.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [Inspec](#), [PubMed](#), [PMC](#), [Astrophysics Data System](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Physics, Multidisciplinary*) / CiteScore - Q1 (Mathematical Physics)
