Deadline for manuscript  
submissions:

**closed (30 June 2022)**

### Message from the Guest Editor

Dear colleagues,

The description of crystallization processes is an actively developing area of research. The classical theory assumes that crystallization proceeds via the formation of small crystallites having the same properties as the finally evolving macroscopic phases. This assumption allows one to describe crystallization qualitatively but may lead to significant problems in reconciling theory and experiment quantitatively. Papers dealing with new approaches to its treatment are invited to this special issue directed e.g. to the description of the (i) thermodynamic driving force of crystallization, phase diagrams of multi-component systems, theoretical predictions of the properties of the melts, (ii) curvature dependence of the surface tension, (iii) specification of both bulk and surface properties of critical crystallites, (iv) interplay of crystal nucleation and glass transition, (v) qualitative change of the response of the ambient phase to crystallization near to the glass transition temperature, (vi) crystallization and growth in inhomogeneous media, (vii) crystallization activity of heterogeneous nucleation cores.

Dr. habil. Jörn W. P. Schmelzer

## Message from the Editor-in-Chief

The concept of entropy is traditionally a quantity in physics that has to do with temperature. However, it is now clear that entropy is deeply related to information theory and the process of inference. As such, entropic techniques have found broad application in the sciences.

*Entropy* is an online open access journal providing an advanced forum for the development and/or application of entropic and information-theoretic studies in a wide variety of applications. *Entropy* is inviting innovative and insightful contributions. Please consider *Entropy* as an exceptional home for your manuscript.

## Author Benefits

**Open Access:** free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High Visibility:** indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [Inspec](#), [PubMed](#), [PMC](#), [Astrophysics Data System](#), and [other databases](#).

**Journal Rank:** JCR - Q2 (*Physics, Multidisciplinary*) / CiteScore - Q1 (Mathematical Physics)
