Message from the Guest Editor

Dear Colleagues,

It has been confirmed by many researchers that exergy analysis accurately quantifies the entropy generation occurring at each component and therefore permits to calculate the lost work (exergy destruction) at the component of thermal systems by the Gouy–Stodola theorem. On the other hand, thermo-economic analysis based on the exergy, which provides a rationale for assessing the cost of product and helps to optimize the thermal systems, requires further studies to clarify the disputed concepts among researchers. Furthermore, thermo-economic diagnosis of the thermal systems, which is one of the important fields in the application of the thermo-economic analysis, has yet to be developed.

This Special Issue aims to provide an open discussion on the research carried out in this field, and submissions related to the optimization of thermal systems based on entropy generation minimization and/or cost minimization, exergy costing, including the lost work, and various methods for the thermo-economic diagnosis are welcome.

Avenue, Albany, NY 12222, USA

Message from the Editor-in-Chief

The concept of entropy is traditionally a quantity in physics that has to do with temperature. However, it is now clear that entropy is deeply related to information theory and the process of inference. As such, entropic techniques have found broad application in the sciences.

Entropy is an online open access journal providing an advanced forum for the development and/or application of entropic and information-theoretic studies in a wide variety of applications. *Entropy* is inviting innovative and insightful contributions. Please consider *Entropy* as an exceptional home for your manuscript.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [Inspec](#), [PubMed](#), [PMC](#), [Astrophysics Data System](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Physics, Multidisciplinary*) / CiteScore - Q1 (Mathematical Physics)
