Environmental Analysis, National  
Research Council, 85050 Tito, PZ,  
Italy

**Prof. Dr. Filippos Vallianatos**

Section of Geophysics-  
Geothermy, Department of  
Geology and Geoenvironment,  
National and Kapodistrian  
University of Athens, Zografou,  
15784 Athens, Greece

Deadline for manuscript  
submissions:

**30 November 2024**

### Message from the Guest Editors

Earthquake time series are complex due to the variety of forces affecting EQ generation, complexity of the Earth's crust and mantle structure, where the earthquake source is developing, and complexity of the EQ process development in space and time. At present, the only way to model these initial stages of EQ source development is experimental and theoretical modeling. New physical/mathematical methods of data analysis like nonlinear dynamics, artificial intelligence/machine learning/deep learning, non-extensive statistical analysis, natural time analysis and complex network approach allow us to obtain mathematical regularities underlying physical/geophysical processes using just the time series of experimental observations.

This Special Issue aims to study the progress in the analysis of complex systems' time series during the fracture process using new approaches. Researchers are encouraged to present original contributions and their latest advancements in theoretical and experimental studies focused on understanding the complexity of earthquake time series.

## Message from the Editor-in-Chief

The concept of entropy is traditionally a quantity in physics that has to do with temperature. However, it is now clear that entropy is deeply related to information theory and the process of inference. As such, entropic techniques have found broad application in the sciences.

*Entropy* is an online open access journal providing an advanced forum for the development and/or application of entropic and information-theoretic studies in a wide variety of applications. *Entropy* is inviting innovative and insightful contributions. Please consider *Entropy* as an exceptional home for your manuscript.

## Author Benefits

**Open Access:** free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

**High Visibility:** indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [Inspec](#), [PubMed](#), [PMC](#), [Astrophysics Data System](#), and [other databases](#).

**Journal Rank:** JCR - Q2 (*Physics, Multidisciplinary*) / CiteScore - Q1 (Mathematical Physics)
