# **Information Theory for Communication Systems**

Guest Editors:

### Dr. Tobias Koch

Signal Theory and Communications Department, Universidad Carlos III de Madrid, Avenida de la Universidad, 30, 28911 Leganés, Spain

#### Dr. Stefan M. Moser

1. Signal and Information
Processing Lab, ETH Zürich, 8092
Zürich, Switzerland
2. Institute of Communications
Engineering, National Chiao
Tung University, Hsinchu 30010,
Taiwan

Deadline for manuscript submissions:

closed (15 December 2020)

### **Message from the Guest Editors**

The founding work of the field of information theory, Claude Shannon's 1948 article "A mathematical theory of communication", concerns the fundamental limits of communication systems. It is, therefore, not surprising that, since its origins, information theory has been very successful in providing performance benchmarks and design guidelines for numerous communication scenarios. This Special Issue aims to bring together recent research efforts that apply information theory to characterize and study the fundamental limits of communication systems. Possible topics include, but are not limited to the following:

- Asymptotic performance characterizations, such as channel capacity, second-order rates, or error exponents, of communication channels
- Nonasymptotic performance bounds for communication systems
- Information-theoretic limits of delay- and energylimited communication systems
- Information-theoretic analyses of signal constellations and low-precision decoders
- Error-correcting codes for communication systems

## **Message from the Editor-in-Chief**

The concept of entropy is traditionally a quantity in physics that has to do with temperature. However, it is now clear that entropy is deeply related to information theory and the process of inference. As such, entropic techniques have found broad application in the sciences.

Entropy is an online open access journal providing an advanced forum for the development and/or application of entropic and information-theoretic studies in a wide variety of applications. Entropy is inviting innovative and insightful contributions. Please consider Entropy as an exceptional home for your manuscript.

### **Author Benefits**

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Inspec, PubMed, PMC, Astrophysics Data System, and other databases.

**Journal Rank:** JCR - Q2 (*Physics, Multidisciplinary*) / CiteScore - Q1 (Mathematical Physics)
