Message from the Guest Editors

Dear Colleagues,

Recently, micro heat sink thermal systems have been used for a wide range of thermal and biological purposes. Among these, microchannels filled with porous materials have received particular attention as they feature favorable characteristics for cooling and pumping technologies in biomedical engineering. Utilization of microchannels has further resulted in the development of the so-called “microreactors” for chemical process intensification. Micro porous tubes have also been used for miniaturized cryocoolers. The applications of microreactors and miniaturized cryocoolers are now at their most extensive and include applications in combustion, hydrogen, cryogenic and syngas production and industrial chemicals. Second law analysis has started to be employed in microchannels and microtubes with applications in micro thermal, mechanical, chemical and biological systems. Further developments in this front call for a more rigorous understanding and modeling of thermodynamic processes in micro devices under highly irreversible conditions.

Message from the Editor-in-Chief

The concept of entropy is traditionally a quantity in physics that has to do with temperature. However, it is now clear that entropy is deeply related to information theory and the process of inference. As such, entropic techniques have found broad application in the sciences.

Entropy is an online open access journal providing an advanced forum for the development and/or application of entropic and information-theoretic studies in a wide variety of applications. *Entropy* is inviting innovative and insightful contributions. Please consider *Entropy* as an exceptional home for your manuscript.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [Inspec](#), [PubMed](#), [PMC](#), [Astrophysics Data System](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Physics, Multidisciplinary*) / CiteScore - Q1 (Mathematical Physics)
