closed (30 January 2024)

Message from the Guest Editor

Dear Colleagues,

For this issue, we propose the use of fractal–multifractal theories in describing the dynamics of complex systems. By complex system, we mean the set of entities in nonlinear interaction at various scales of resolution, from the microscopic to the macroscopic scale. In such a context, dynamics at the subatomic, atomic, molecular, mesoscopic, intragalactic, and extragalactic scale will be considered. Dynamics analyses can also be extended to biological systems. All these dynamic descriptions must be based on notions and concepts such as entropy in the Shannon, Fischer, fractal sense, etc., as well as on the role of invariants that can be built based on the concepts of entropy and informational energy (multifractal entropy, informational energy in the sense of Onicescu, etc.)

Message from the Editor-in-Chief

The concept of entropy is traditionally a quantity in physics that has to do with temperature. However, it is now clear that entropy is deeply related to information theory and the process of inference. As such, entropic techniques have found broad application in the sciences.

Entropy is an online open access journal providing an advanced forum for the development and/or application of entropic and information-theoretic studies in a wide variety of applications. *Entropy* is inviting innovative and insightful contributions. Please consider *Entropy* as an exceptional home for your manuscript.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [Inspec](#), [PubMed](#), [PMC](#), [Astrophysics Data System](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Physics, Multidisciplinary*) / CiteScore - Q1 (Mathematical Physics)
