The year 2019 marks the 150th anniversary of Thomas Andrews' report of p-V isotherms of carbon dioxide. Andrews' experimental measurements resulted in the discovery of a critical temperature below which a gas cannot be condensed to a liquid by pressure; thence began the study of the "thermodynamics of fluid phase equilibria". Andrews' theory of the continuity of gaseous and liquid states led to Van der Waals' first fluid equation-of-state, i.e. relating p-V-T. Rowlinson's centenary review highlighted some achievements, but also exposed unanswered questions 100 years after Andrews.

This Special Issue will hopefully capture a snapshot of the research activity 50 years on from Rowlinson. We welcome contributions from experimental research, both laboratory and computer, and from theoretical studies, on the thermodynamic description of phase equilibria for all classes of fluids, including water and ionic liquids.

Message from the Editor-in-Chief

The concept of entropy is traditionally a quantity in physics that has to do with temperature. However, it is now clear that entropy is deeply related to information theory and the process of inference. As such, entropic techniques have found broad application in the sciences.

Entropy is an online open access journal providing an advanced forum for the development and/or application of entropic and information-theoretic studies in a wide variety of applications. *Entropy* is inviting innovative and insightful contributions. Please consider *Entropy* as an exceptional home for your manuscript.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [Inspec](#), [PubMed](#), [PMC](#), [Astrophysics Data System](#), and [other databases](#).

Journal Rank: JCR - Q2 (Physics, Multidisciplinary) / CiteScore - Q1 (Mathematical Physics)
