Advances in Complex Systems Modelling via Hypergraphs II

Guest Editors:

Dr. Antonello Rizzi

Department of Information Engineering, Electronics and Telecommunications, Sapienza University of Rome, 00185 Roma, RM, Italy

Dr. Alessio Martino

Department of Business and Management, LUISS Guido Carli University, Viale Romania 32, 00197 Rome, Italy

Deadline for manuscript submissions:
closed (20 March 2024)

Message from the Guest Editors

Hypergraphs overcome these limitations by allowing hyperedges to connect simultaneously more than two nodes would. The greater modelling capabilities of multi-way relationships have been demonstrated in fields such as biology (e.g., protein–protein interaction networks) and social networks (e.g., collaboration networks). Yet, the power of hypergraphs is not limited to a mere representation of data. Hypergraphs and simplicial complexes also play a key role in the emergent field of topological data analysis, whose aim is to analyze a set of data (or point clouds) using techniques derived from topology and mathematics. In fact, rather than analyzing the data themselves (which can be difficult due to noise, high dimensionality, and so on), one can build a filtered set of simplicial complexes and study their properties.

Special Issue

entropy

an Open Access Journal by MDPI

Editor-in-Chief

Prof. Dr. Kevin H. Knuth

Department of Physics, University
at Albany, 1400 Washington
Avenue, Albany, NY 12222, USA

Message from the Editor-in-Chief

The concept of entropy is traditionally a quantity in physics that has to do with temperature. However, it is now clear that entropy is deeply related to information theory and the process of inference. As such, entropic techniques have found broad application in the sciences.

Entropy is an online open access journal providing an advanced forum for the development and/or application of entropic and information-theoretic studies in a wide variety of applications. *Entropy* is inviting innovative and insightful contributions. Please consider *Entropy* as an exceptional home for your manuscript.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [Inspec](#), [PubMed](#), [PMC](#), [Astrophysics Data System](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Physics, Multidisciplinary*) / CiteScore - Q1 (Mathematical Physics)
