Message from the Guest Editor

Inter- and multi-disciplinarity are essential in studying complex social systems. However, there are no commonly accepted definitions of the complexity of social systems. Additionally, any kind of social system can be studied with models of collective behavior drawn from physics, chemistry, control theory, etc. Everything depends on the choice of border conditions concerning the definition of a “social system”. In consequence, an unlimited number of mathematical models depicting the complexity of the social phenomena can be produced. On the other hand, qualitative ideas of complexity applied in social sciences need more advanced mathematical models.

Theoretical and empirical papers linking mathematical modeling of collective social phenomena with a deepened level of phenomenological interpretations are welcome. We also invite attempts to develop mathematical models of complexity-related qualitative concepts, for example, complex social systems of Niklas Luhmann.

Message from the Editor-in-Chief

The concept of entropy is traditionally a quantity in physics that has to do with temperature. However, it is now clear that entropy is deeply related to information theory and the process of inference. As such, entropic techniques have found broad application in the sciences.

Entropy is an online open access journal providing an advanced forum for the development and/or application of entropic and information-theoretic studies in a wide variety of applications. *Entropy* is inviting innovative and insightful contributions. Please consider *Entropy* as an exceptional home for your manuscript.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [Inspec](#), [PubMed](#), [PMC](#), [Astrophysics Data System](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Physics, Multidisciplinary*) / CiteScore - Q1 (Mathematical Physics)
