Entropy in Data Analysis II

Guest Editors:

Dr. Hamed Azami

Research Fellow in Biomedical Signal Processing & Machine Learning, University of Toronto, Toronto, ON M5S 1A1, Canada

Dr. Peng Li

Department of Medicine, Brigham and Women's Hospital, Harvard Medical School, Boston, MA 02115, USA

Prof. Dr. Jose C. Principe

Computational NeuroEngineering Lab, University of Florida, Gainesville, FL 32611, USA

Deadline for manuscript submissions:

closed (15 October 2023)

Message from the Guest Editors

Entropy is a powerful nonlinear metric widely used to assess the dynamical characteristics of data. A number of methods, such as sample entropy, fuzzy entropy, permutation entropy, distribution entropy, and dispersion entropy, have been introduced to quantify the irregularity or uncertainty of signals and images. Their multiscale extensions have been developed to quantify the complexity of data to deal with the multiple time scales inherent in such signals and images. For a better understanding of the signal-generating multivariate underlying system, multiscale entropy methods have also been proposed to take into account both the time and spatial domains at the same time.

The main goal of this Special Issue is to disseminate new and original research based on entropy analyses in order to assist in a better understanding of the physiology and data-generating mechanism, early diagnosing disorders or diseases, treatment monitoring, and planning healthcare strategies, required to prevent the occurrences of certain pathologies.

Department of Physics, University at Albany, 1400 Washington Avenue, Albany, NY 12222, USA

Message from the Editor-in-Chief

The concept of entropy is traditionally a quantity in physics that has to do with temperature. However, it is now clear that entropy is deeply related to information theory and the process of inference. As such, entropic techniques have found broad application in the sciences.

Entropy is an online open access journal providing an advanced forum for the development and/or application of entropic and information-theoretic studies in a wide variety of applications. Entropy is inviting innovative and insightful contributions. Please consider Entropy as an exceptional home for your manuscript.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Inspec, PubMed, PMC, Astrophysics Data System, and other databases.

Journal Rank: JCR - Q2 (*Physics, Multidisciplinary*) / CiteScore - Q1 (Mathematical Physics)
