Message from the Guest Editor

The study of sociophysics has greatly increased in the last two decades. The models used in sociophysics mainly envisage the study of the macroscopic dynamics of social systems. Then, the statistical physics tools successfully applied in treating diverse systems in the physical world are used to find extensive applications in problems related to such topics. Stauffer stated an interesting and fundamental question in 2012: does sociophysics have any practical applications? The answer to this question came in 2017 from Galam with a model that uses local-majority-rule arguments and obeys threshold dynamics. Galam applied this model to predict Trump's victory in the 2016 United States election. In fact, Galam is convinced that the dynamics of opinions obey discoverable universal quantitative laws and can be modeled in the same way that scientists model the physical world. So, opinion-dynamics models have become a mainstream of research in sociophysics. In these models, opinion entropy, based on Shannon entropy, is a useful tool to evaluate the uncertainty of opinions, it is helpful for exploring the dynamics of opinion entropy and controlling the formation of public opinion.

Message from the Editor-in-Chief

The concept of entropy is traditionally a quantity in physics that has to do with temperature. However, it is now clear that entropy is deeply related to information theory and the process of inference. As such, entropic techniques have found broad application in the sciences.

Entropy is an online open access journal providing an advanced forum for the development and/or application of entropic and information-theoretic studies in a wide variety of applications. *Entropy* is inviting innovative and insightful contributions. Please consider *Entropy* as an exceptional home for your manuscript.

Author Benefits

Open Access: free for readers, with [article processing charges \(APC\)](#) paid by authors or their institutions.

High Visibility: indexed within [Scopus](#), [SCIE \(Web of Science\)](#), [Inspec](#), [PubMed](#), [PMC](#), [Astrophysics Data System](#), and [other databases](#).

Journal Rank: JCR - Q2 (*Physics, Multidisciplinary*) / CiteScore - Q1 (Mathematical Physics)
