Sustainable Grape Production, Climate Change, and Wine Quality

Guest Editor:

Prof. Dr. Rafael Andrés Peinado Amores

Department of Agricultural Chemistry, Soil Science and Microbiology. University of Córdoba, Córdoba, Spain

Deadline for manuscript submissions:

30 November 2024

Message from the Guest Editor

Dear Colleagues,

Climate change is affecting grape harvest yield, must composition, and wine quality in many of the regions classified as producers of quality wines. To mitigate such effects, different strategies can be carried out, including viticultural ones and those related to wine microbiology and biotechnology.

In this Special Issue, we aim to compile articles addressing, but not limited to, the following:

- 1. Sustainable vineyard production and its impact on the final wine quality.
- 2. The use of viticultural practices to address the effects of climate change and their impact on the final wine quality.
- 3. The use of fermentative biotechnologies to enhance wine quality in the context of climate change and sustainable production.

Prof. Dr. Rafael Andrés Peinado Amores

Message from the Editor-in-Chief

Welcome to a new open access journal, Fermentation, which meets the growing need for a high quality peerreviewed international journal with easy access to all researchers globally. We hope that you will share our enthusiasm for this new journal and look forward to working with you to make Fermentation a leader in its field. Your contributions are vital for the success of this new journal. Proposals for editing a special issue for a particular topical area are always welcome.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubAg, FSTA, Inspec, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (*Biotechnology and Applied Microbiology*) / CiteScore - Q2 (*Plant Science*)
